MallParking

Smart parking for malls

A mall-friendly solution that improves the visitor journey from arrival to departure.

✓ **No app required**

Smart parking for happier customers

Pilot proposal | MallParking

Parking problem

Visitor pain points

- The visitor enters the mall and finds full or unclear parking levels.
- After shopping, they may forget where the car was parked.
- They move between levels searching for a parking space.
- The result: wasted time, stress, and a poor mall experience.

How does the system work?

1 Scan & reserve

1

The visitor scans the QR code and chooses the most suitable parking space.

2 Confirm parking

2

When the visitor reaches the space, they confirm parking and receive a digital card.

3 Find your car

3

If the visitor forgets the card, they scan Find My Car and retrieve the parking location.

No app download required — the full journey runs directly in the browser via QR.

Mall value

Why does it matter?

Improve visitor satisfaction
A smoother arrival and exit journey.

Reduce complaints and pressure
Fewer “Where did I park?” questions.

Clearer parking operations
Admin/operator dashboard for status updates.

Measurable data
Track usage, searches, and active areas.

Pilot metrics

- Number of scans
- Digital cards
- Find My Car usage
- Status updates

MallParking

Suggested 30-day pilot

Pilot scope

- One floor or one zone
- 20–50 spaces to start
- Slot QR codes and Find My Car QR signage

Operations

- Mall admin account
- Operator account
- Status monitoring and reports

Success indicators

- Visitor QR usage
- Car location retrieval
- Visitor and operations team feedback

Next step

A short 10-minute demo, followed by selecting a suitable zone for the pilot inside the mall.
